

Fig. S2. Gastric cancer-specific survival according to cancer stage in each age group: (A) stage I, (B) stage II, (C) stage III, and (D) stage IV. The statistical significances are reduced for GC-specific survival, with a smaller difference compared to the overall survival ($p < 0.001$, $p = 0.554$, $p = 0.210$, and $p = 0.112$ for stages I–IV, respectively).
