Fig. S4. Gastric cancer-specific survival according to sex in each age group: (A) I (young: age <65 years), (B) II (early-old: age 60–74 years), (C) III (old: age ≥75 years). Men showed GC-specific survival advantages all age groups (p=0.867, p=0.032, and p=0.793 in groups I–III, respectively).
