

Table S3. Crude and adjusted betas coefficients to estimate the association between gait speed tertiles and functional reach in older adults from 12 high Andean communities in Peru

Gait speed	Crude			Adjusted		
	β	95% CI	p-value	a β ^{a)}	95% CI	p-value
High tertile	Reference	-	-	Reference	-	-
Intermediate tertile	-0.81	-0.68 to 2.31	0.286	1.19	-0.28 to 2.66	0.112
Low tertile	-2.04	-3.54 to -0.54	0.008*	-2.21	-3.70 to -0.72	0.004*

β , beta coefficients; CI, confidence interval; a β , adjusted beta coefficients.

^{a)}Adjusted for sex, age, educational level, living alone, work, comorbidities, neurocognitive disorder, depressive symptomatology, and disability.

*p<0.05.
